Tempo Industries New Series 6000 HB LED Cove Lighting Wins Gold Award From IIDEX/NeoCon Canada

Irvine, California, September, 2009 — Tempo Industries, Inc.

has announced that its **Series 6000 HB LED Cove Lighting** received the Gold Award for Innovation in the Interior Lighting category of exhibitors, at the Light Canada portion of the IIDEX/NEOCON CANADA conference and trade show, in Toronto in September, 2009. Terrence C. Walsh, president and chief operating officer of Tempo Industries, made the announcement.

Awards were given based on product design and technical innovation, noting originality of the product and its market applications, as agreed by a panel of independent judges selected by IIDEX/NEOCON CANADA. Judges view each product personally, have it demonstrated to them and ask questions. The Gold Award is the highest recognition in the competition, from among hundreds of entries in the broad Lighting category.

Series 6000 HB LED Cove Lighting is a new, state-of-the-art articulated lighting system for coves and soffits in all commercial and institutional installations. It is a line-voltage system requiring no remote transformers, and is a direct replacement for linear fluorescent cove systems.

Featuring an articulating, thermally optimized die-cast aluminum chassis, **Series 6000** employs High-Brightness LEDs that deliver more than 450 lumens per foot, over 62 lumens per watt, with an 82 CRI (color rendering index) in color temperatures ranging from 2700°K to 4200°K. The **Series 6000** has multiple

patents pending, is CSA listed and is IESNA LM-79 tested and exceeds D.O.E. and Energy-Star criteria for energy-efficiency. **Series 6000 HB LED Cove Lighting** uses the latest in reliable and efficient CREE LEDs for state-of-the-art performance.

Series 6000 HB LED Cove Lighting projects exceptional shadow-free illumination into an interior space from horizontal or vertical coves, including right angles and curved. It is equally suited for new construction or retrofit, with integral LED drivers and power supplies.

Units are offered in 12-inch modules factory joined and completely wired, in standard six-foot lengths, allowing bend angles to 90 degrees with radii as small as 12 inches. A single electrical connection feeds up to 120-foot runs. **Series 6000 HB LED Cove Lighting** also features Tempo's *No Factory in the Field* design philosophy, making it easy to specify, install and maintain.
